Marudhar Kesari Jain College For Women(Autonomous),Vaniyambadi

Student Enrollment & Course Management System (SECMS)

User Story:

The **Student Enrollment & Course Management System (SECMS)** is a Salesforce-based application developed to simplify and automate the enrollment activities of an educational institution. The system helps administrators, enrollment officers, and instructors manage student information, course details, enrollments, instructor allocation, approval workflows, payments, and reports in one integrated platform.

This application improves the efficiency of academic management by organizing all enrollmentrelated tasks within a single Salesforce environment.

1. INTRODUCTION

1.1 Project Overview :

The main objective of this project is to maintain all student, course, and enrollment data in a centralized Salesforce system. By storing data in one platform, the institution can easily access information, maintain structured workflows, and generate accurate reports.

Through this system, enrollment officers can handle student admissions, course registrations, and communication more effectively. At the same time, instructors and administrators can clearly monitor course allocations and track student progress.

The system also supports automation features such as instructor assignment, task creation, validation rules, and multi-level approval processes. Using Salesforce tools like **Flows, Validation Rules, Approval Processes, Reports, and Dashboards**, the institution can monitor key metrics such as total enrollments, revenue generated, student status distribution, and pending approvals.

This ensures that all processes—from student admission to course completion—are handled in an organized and transparent manner.

1.2 Purpose :

The purpose of the SECMS project is to replace traditional manual enrollment methods with an automated Salesforce solution.

This system helps to ensure:

- Proper management of student information
- Structured enrollment processes
- Automated approvals and validations
- Clear reporting and monitoring of academic activities

By implementing this system, institutions can improve efficiency and reduce errors in enrollment operations.

2. IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Enrollment Officer	Manage student enrollments efficiently	Data is scattered	Systems are manual and not integrated	Leads to frustration and errors
PS-2	Administrator	Track enrollments and revenue	Reports are delayed	Data is not centralized	Difficult to make decisions

2.2 Empathy Map Canvas

User Persona: Enrollment Officer

- **Think & Feel**: Concerned about duplicate records and revenue loss.
- **Hear**: Complaints from students and management about delays.
- **See**: Multiple spreadsheets, emails, and manual data entry.
- **Say & Do**: Cross-checks data frequently and manually follows up on approvals.

  Pain Points: Duplicate entries, Slow approval process

- **Gain**: Automated workflows, Dashboard insights, Faster enrollment processing

2.3 Brainstorming & Idea Prioritization

Step 1 – Brainstormed Ideas

Different solutions were considered during the brainstorming phase:

- Spreadsheet-based automation
- Standalone enrollment portal
- ERP system integration
- Salesforce-based enrollment management system

Step 2 – Idea Grouping

The ideas were grouped into three categories:

- Manual solutions
- Semi-automated solutions
- Fully automated cloud solutions

Step 3 – Prioritization

- After evaluating feasibility and impact, the **Salesforce-based Student Enrollment & Course Management System (SECMS)** was selected because it offers high automation capability and scalability.

3.REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

The system supports the following stages of the enrollment process:

1. Awareness and student registration
2. Course selection
3. Enrollment request submission
4. Fee payment
5. Approval process
6. Instructor assignment
7. Reporting and course completion

3.2 Solution Requirements

Functional Requirements

FR No	Epic	Description
FR-1	Student Management	Manage and maintain student information
FR-2	Course Management	Create and manage course details
FR-3	Enrollment Processing	Request, approve, or reject enrollments
FR-4	Instructor Assignment	Automatically assign instructors
FR-5	Reporting	Generate reports and dashboards

Non-Functional Requirements

NFR-1: Usability

The system should have a simple and user-friendly interface that allows users to perform tasks easily with minimal training.

Examples:

- Simple student registration form
- One-click enrollment approval
- Role-based dashboards

NFR-2: Security

The system should ensure that sensitive student and institutional data is protected through proper authentication and authorization.

Examples:

- Only administrators can modify course information Instructors can view only their assigned students
- Students cannot access other students' records

NFR-3: Reliability

The system must operate accurately without errors during enrollment processing, approvals, and report generation.

Examples:

- Prevent duplicate course registration
- Maintain accurate enrollment status updates
- Generate consistent reports

NFR-4: Performance

The system should provide fast response times to ensure smooth operations during peak admission periods.

Examples:

- Fast dashboard loading
- Quick search for student records
- No delays during bulk data uploads

NFR-5: Scalability

The system must support future growth in the number of students, courses, and departments without affecting performance.

Examples:

- Ability to add new departments easily
- Support for increasing admissions every year
- Capability to integrate with mobile or portal systems

NFR-6: Availability

The system should be accessible whenever users need it and minimize downtime during academic operations.

Examples:

- Cloud-based 24/7 access
- Reliable performance during peak admissions
- Automatic backup of student records

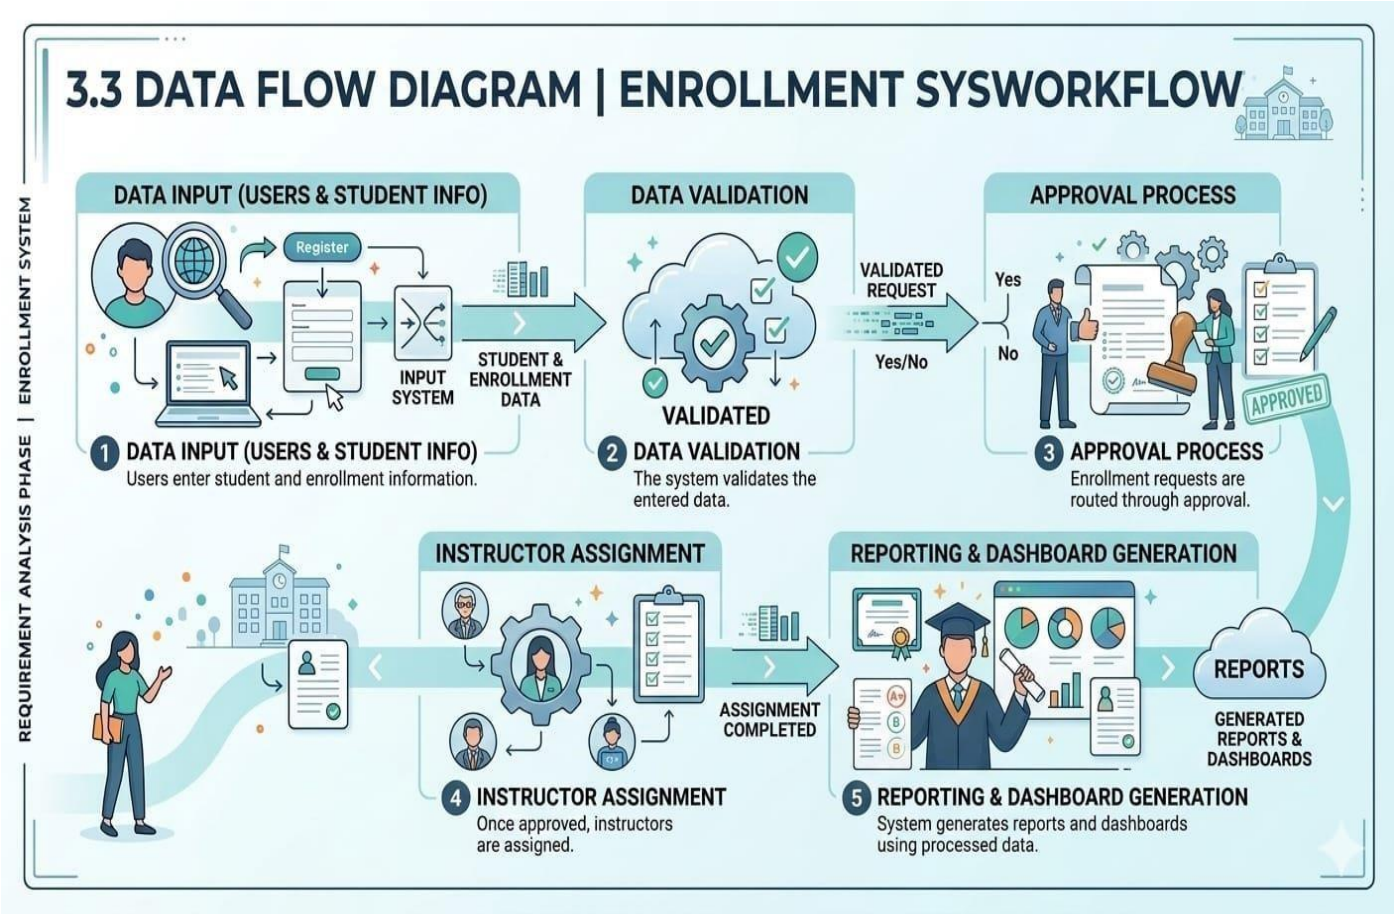
3.3 Data Flow Diagram

The system workflow follows these steps:

1. Users enter student and enrollment information.
2. The system validates the entered data.
3. Enrollment requests are routed through the approval process.
4. Once approved, instructors are assigned.
5. The system generates reports and dashboards using the processed data.

3.4 Technology Stack

Layer	Technology
User Interface	Salesforce Lightning
Business Logic	Salesforce Flows
Database	Salesforce Objects
Automation	Validation Rules and Approval Processes
Reporting	Reports and Dashboards

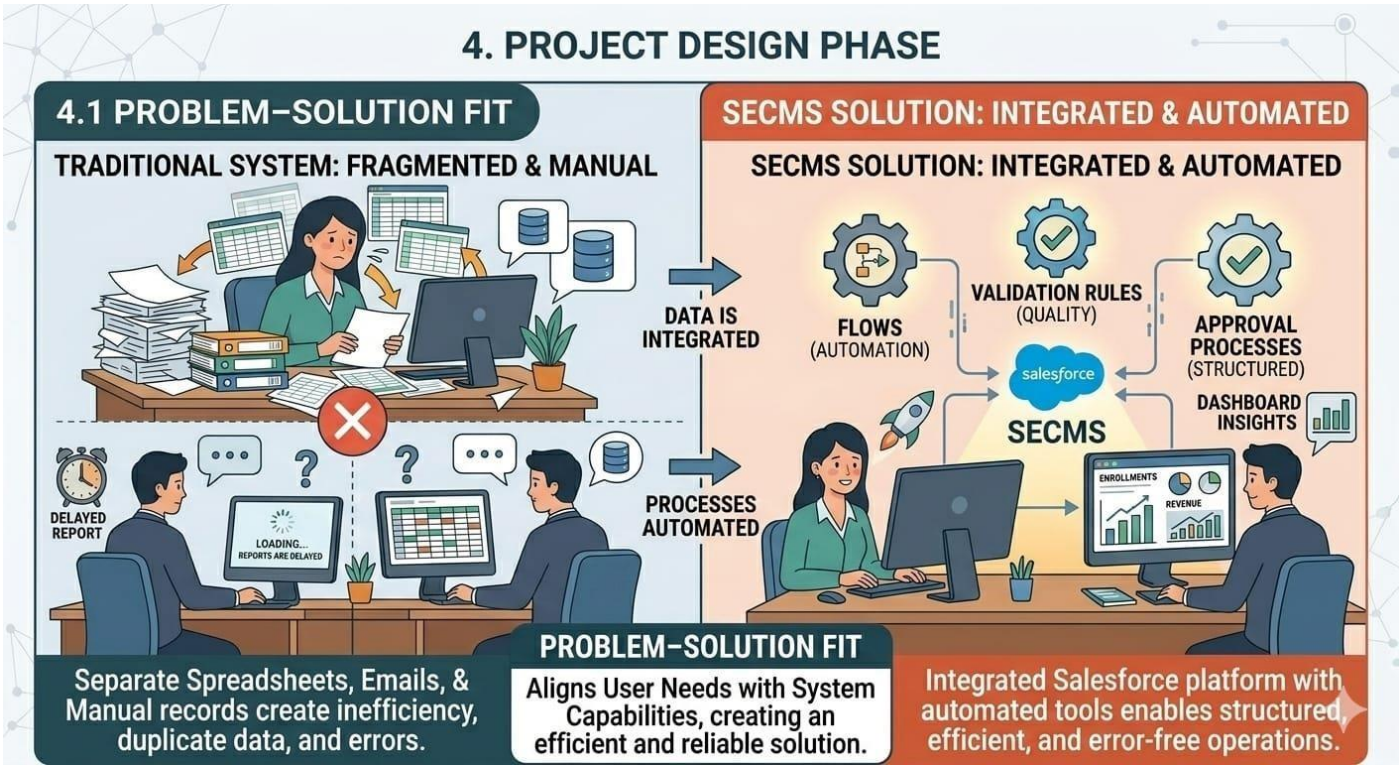


4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The Student Enrollment & Course Management System (SECMS) is designed to solve the problem of fragmented and manual enrollment processes used in many educational institutions. In traditional systems, student information, course details, and enrollment records are often stored in separate spreadsheets or manual records, which leads to inefficiency and errors.

The SECMS solution integrates all these processes into a single Salesforce-based platform. By using Salesforce automation tools such as flows, validation rules, and approval processes, the system ensures that enrollment operations are handled in a structured and automated manner. This alignment between user needs and system capabilities creates an efficient and reliable solution.



4.2 Proposed Solution

Functional Requirements

Parameter	Description
Problem	Manual and unorganized enrollment management
Solution	Salesforce-based Student Enrollment & Course Management System
Innovation	End-to-end automation of enrollment processes
Social Impact	Improves student experience and administrative efficiency
Revenue Model	Can be deployed by educational institutions for academic management
Scalability	Supports multiple departments, courses, and large numbers of students

The proposed system automates student registration, course management, enrollment approval, instructor assignment, and reporting. This ensures smooth academic operations and reduces manual workload.

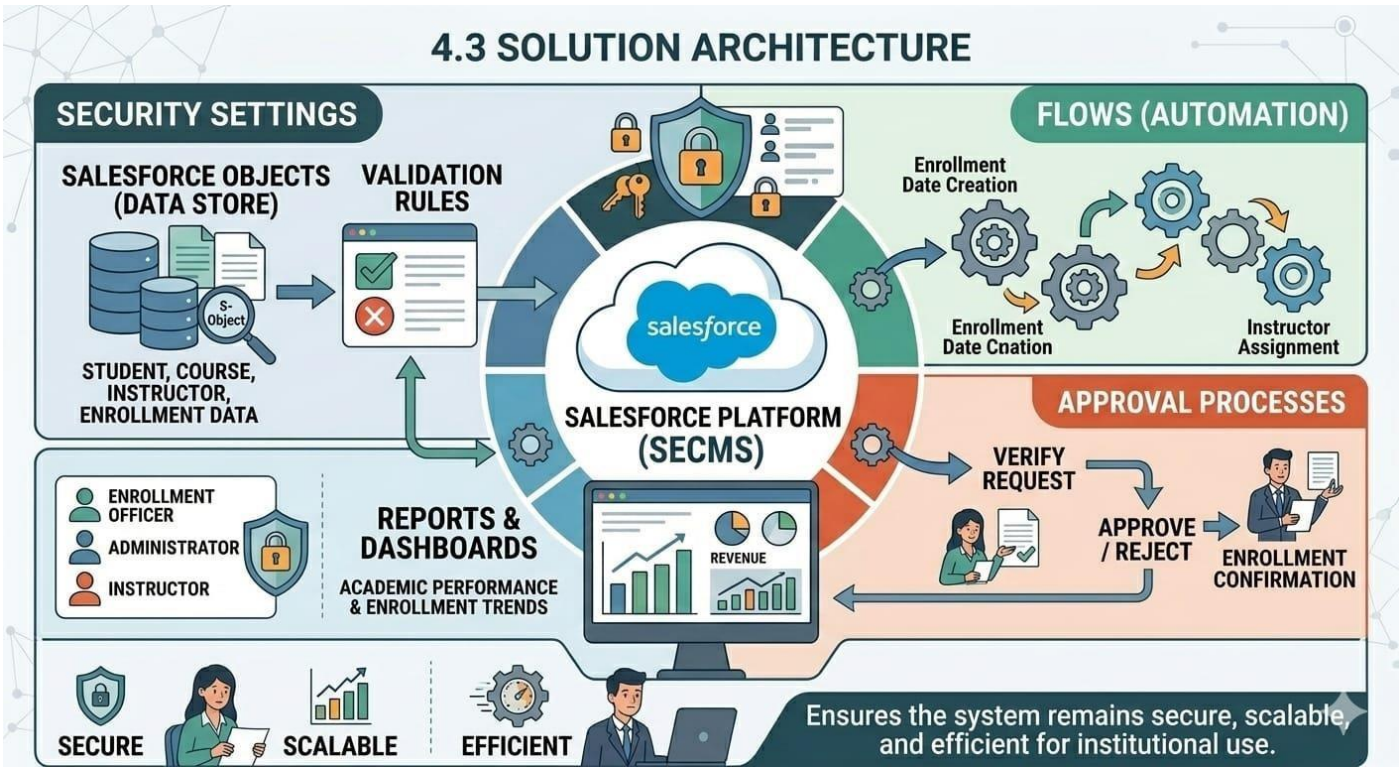
4.3 Solution Architecture

The system architecture is built using different Salesforce components that work together to manage academic processes.

Key components include:

- **Salesforce Objects** for storing student, course, instructor, and enrollment data
- **Validation Rules** to ensure accurate data entry
- **Flows** for automating processes such as enrollment date creation and instructor assignment
- **Approval Processes** to verify enrollment requests before confirmation
- **Reports and Dashboards** to analyze academic performance and enrollment trends
- **Security Settings** to control access based on user roles

This architecture ensures that the system remains secure, scalable, and efficient for institutional use.



5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

The development of the SECMS project follows the **Agile methodology**, which allows the project to be divided into smaller tasks called sprints. Each sprint focuses on completing a specific set of features.

The project planning process includes:

- Dividing the system into **Epics and User Stories**
- Assigning **Story Points** for estimating task complexity
- Organizing work into **sprint cycles**
- Tracking project progress using **velocity and burndown charts**

This approach helps the development team monitor progress and deliver features in an organized manner.

Sprint	**Functional Requirement**	**User Story**
Sprint 1	Developer Setup	Create Salesforce developer account
Sprint 1	Data Modeling	Create custom objects for Student, Course, Enrollment, and Instructor
Sprint 2	Data Modeling	Create tabs for easy navigation
Sprint 2	Data Modeling	Create fields for storing student and course information
Sprint 2	Data Modeling	Build Lightning application
Sprint 2	Data Modeling	Define relationships between objects
Sprint 2	Data Modeling	Customize page layouts
Sprint 3	Automation	Implement validation rules
Sprint 3	Automation	Create automation flows
Sprint 3	Automation	Implement approval process
Sprint 4	Security	Configure role-based access
Sprint 5	Reports	Generate reports for academic monitoring
Sprint 6	Dashboards	Create dashboards for data visualization

5.2 Project Tracker

Sprint	Story Points	Duration	Start Date	End Date
Sprint 1	20	6 Days	24 Oct 2022	29 Oct 2022
Sprint 2	20	6 Days	31 Oct 2022	05 Nov 2022
Sprint 3	20	6 Days	07 Nov 2022	12 Nov 2022
Sprint 4	20	6 Days	14 Nov 2022	19 Nov 2022

The sprint schedule helps track task completion and ensures that the project progresses according to the planned timeline.

6. PROJECT DEVELOPMENT PHASE:

Project Flow:

Milestone 1: Creating Salesforce Developer Account

Milestone 2: Creating Custom Objects (Student, Course, Enrollment, Instructor)

Milestone 3: Creating Tabs for each object

Milestone 4: Building the Lightning Application

Milestone 5: Creating Fields for storing required data

Milestone 6: Establishing relationships between objects

Milestone 7: Customizing page layouts

Milestone 8: Implementing validation rules

Milestone 9: Creating automation flows

Milestone 10: Configuring approval processes

Milestone 11: Generating reports

Milestone 12: Designing dashboards

Milestone 13: Implementing security settings

Milestone 14: Conclusion

Each milestone contributes to building the complete enrollment management system.

What you'll learn

Through the development of the **Student Enrollment & Course Management System (SECMS)** using Salesforce, several important concepts and practical skills are gained. This project helps in understanding how cloud-based platforms can be used to build real-world applications for educational institutions.

The following concepts are learned during this project:

1. Implementation of a real-time Salesforce project.
2. Designing and creating custom objects and defining relationships between them.
3. Customizing page layouts and creating record types for different business processes.
4. Writing validation rules to ensure correct data entry.
5. Automating processes using Salesforce Flow.
6. Creating approval workflows for enrollment verification.
7. Developing reports and dashboards to visualize data.
8. Configuring security using profiles, permission sets, and sharing settings.
9. Performing end-to-end application testing.

Milestone 1-Salesforce :

Introduction:

Are you new to Salesforce? Not sure exactly what it is, or how to use it? Don't know where you should start on your learning journey? If you've answered yes to any of these questions, then you're in the right place. This module is for you.

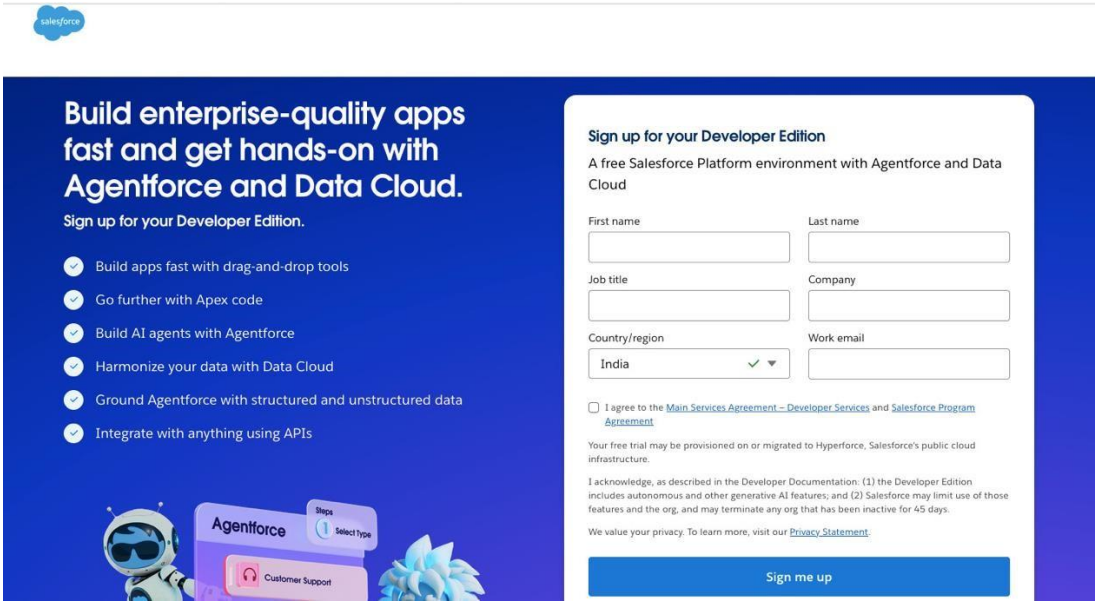
Welcome to Salesforce! Salesforce is game-changing technology, with a host of productivity-boosting features, that will help you sell smarter and faster. As you work toward your badge for this module, we'll take you through these features and answer the question, "What is Salesforce, anyway?".

What Is Salesforce?

Salesforce is your customer success platform, designed to help you sell, service, market, analyze, and connect with your customers. Salesforce has everything you need to run your business from anywhere. Using standard products and features, you can manage relationships with prospects and customers, collaborate and engage with employees and partners, and store your data securely in the cloud. So what does that really mean? Well, before Salesforce, your contacts, emails, follow-up tasks, and prospective deals might have been organized something like this: https://youtu.be/r9EX3lGde5k

Activity 1: Creating Developer Account:

- Creating a developer org in salesforce.
- Go to https://developer.salesforce.com/signup
- On the sign up form, enter the following details :



Steps to Create the Developer Account

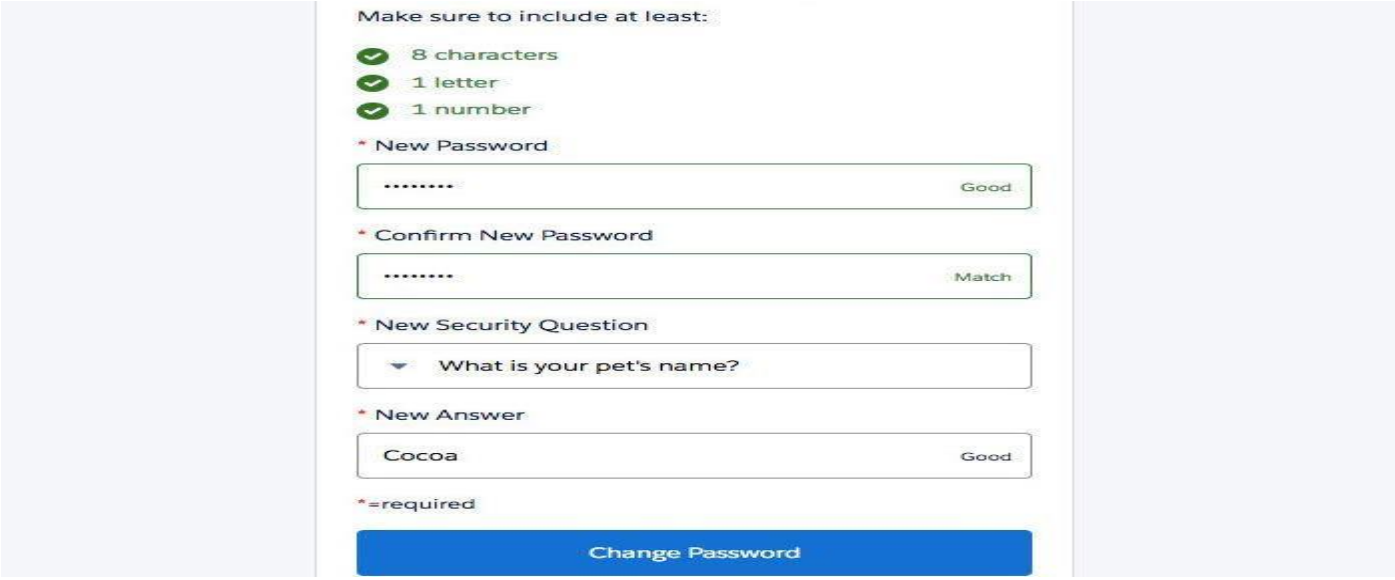
1. Open the Salesforce developer signup page.
2. Fill in the required information such as:
   - First Name and Last Name
   - Email Address
   - Role (Developer)
   - Company Name (College Name)
   - Country (India)
   - Postal Code
3. Enter a unique **username** in email format (for example: username@organization.com).
4. Click **Sign Me Up** to complete the registration process.

This developer account allows users to create objects, fields, automation processes, and other components needed for the project.

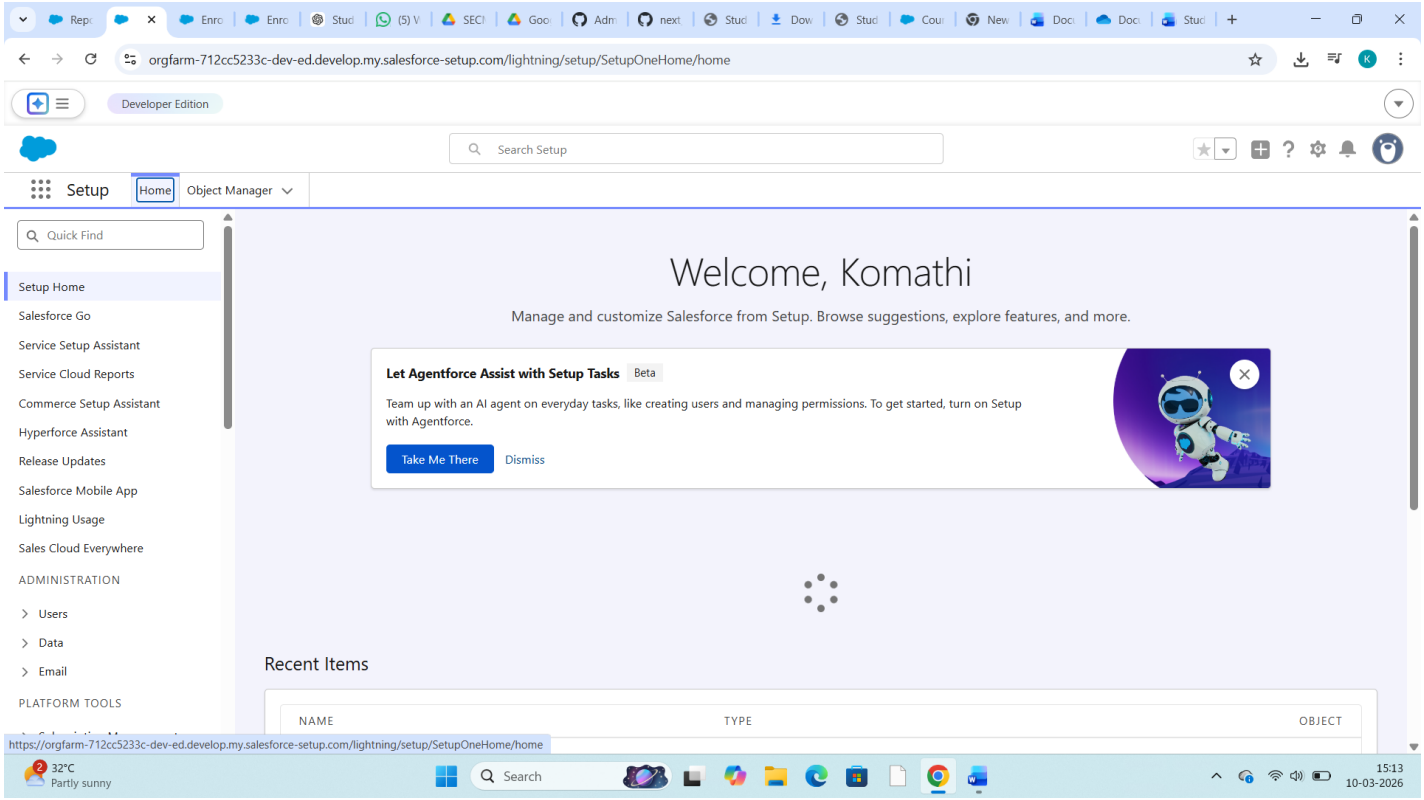
Activity 2: Account Activation:

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

2. Click on Verify Account
3. Give a password and answer a security question and click on change password.



5. Then you will redirect to your salesforce setup page.



Milestone 2 – Objects:

Custom objects are created in Salesforce to store different types of data required for the system. In this project, four main objects were created:

- Student
- Course
- Instructor
- Enrollment

These objects help in organizing and managing academic information within the system.

Creating the Student Object

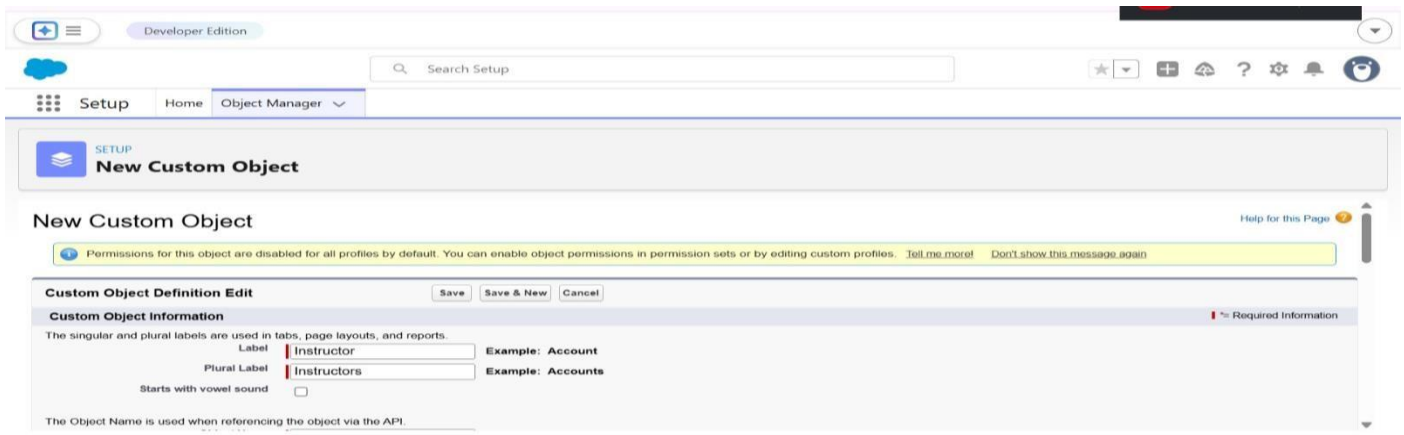
The **Student object** is used to store information related to students such as their name, contact details, and enrollment status.

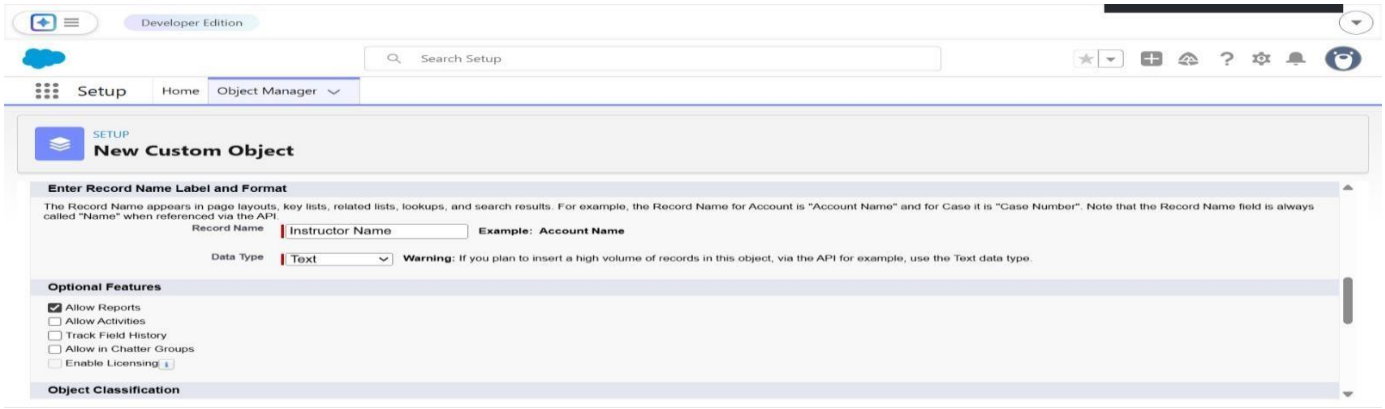
Steps

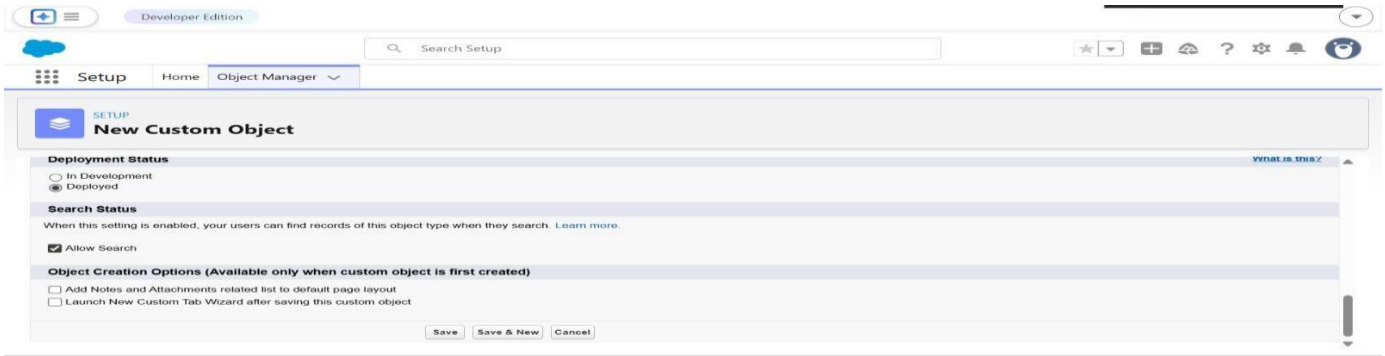
1. Navigate to **Setup** in Salesforce.
2. Open **Object Manager**.
3. Click **Create → Custom Object**.
4. Enter the following details:

- Label: Student
- Plural Label: Students
- Object Name: Student
- Record Name: Student Name □ Data Type: Text

5. Enable optional features such as:
   - ○ Allow Reports ○
   Allow Activities ○
   Track Field History
6. Enable **Search Status** to allow search functionality.
7. Click **Save**.







The same procedure is followed to create the **Course, Instructor, and Enrollment objects**.

Milestone 3 - Fields:

Table 1: Student Object Fields:

Field Label	Data Type
Student Name	Text (Standard)
Email	Email
Phone	Phone
Date of Birth	Date
Student Status	Picklist
Address	Text Area

Table 2: Course Object Fields:

Field Label	Data Type
Course Name	Text (Standard)
Category	Picklist
Duration	Number/Text
Course Fee	Currency
Description	

Table 3: Instructor Object Fields:

Field Label	Data Type
Instructor Name	Text (Standard)
Instructor Code	Text
Expertise	Picklist
Phone	Phone
Email	Email

Table 4: Enrollment Object Fields:

Field Label	Data Type
Student	Lookup (Student)

Course	Lookup (Course)
Instructor	Lookup (Instructor)
Enrollment Date	Date
Enrollment Status	Picklist
Fees Paid	Checkbox
Total Amount	Currency
Comments	Text Area

Milestone 4 – Create Relationships:

1. Activity 1: Create Lookup from Enrollment to Student:

1. Go to Setup → click Object Manager.
2. Type Enrollment in Quick Find → click Enrollment__c object. 3. Click Fields & Relationships → click New.
4. Select Lookup Relationship → click Next. 5. For

Related To, select Student__c → click Next.

6. Enter Field Label: Student (API Name: Student__c).
7. Click Next through Field-Level Security and Layout options (ensure it's visible and added to layout).
8. Click Save.

Activity 2: Create Lookup from Enrollment to Course

Purpose:
To link each Enrollment to a Course.

Steps:

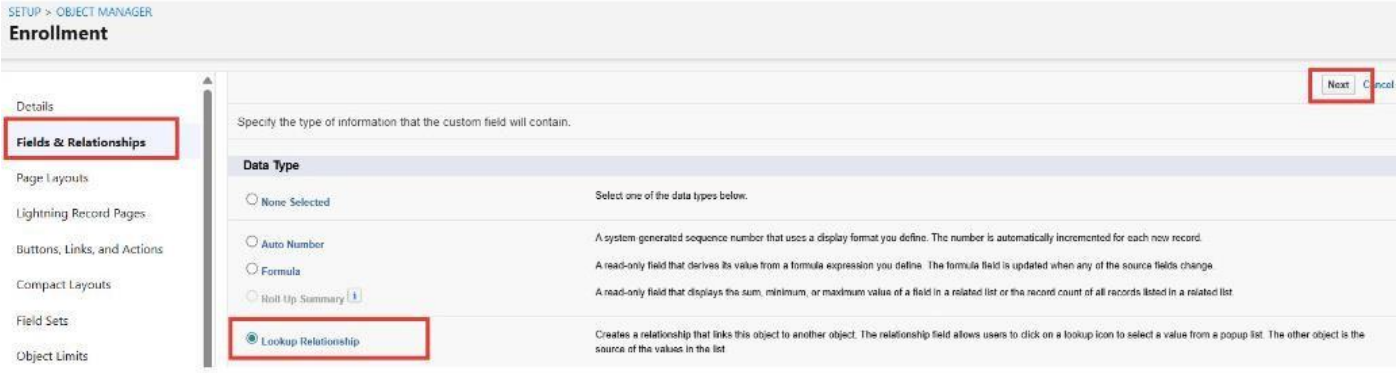
1. Go to Setup → Object Manager → Enrollment__c.
2. Click Fields & Relationships → New.
3. Select Lookup Relationship → Next.
4. Related To: select Course__c → click Next.
5. Field Label: Course (API Name: Course__c).
6. Click Next (set visibility and layout) → Save.

Activity 3: Create Lookup from Enrollment to Instructor:

Purpose:
To store which Instructor is assigned to a particular Enrollment.

Steps:

1. Go to Setup → Object Manager → Enrollment__c.
2. Click Fields & Relationships → New.
3. Choose Lookup Relationship → Next.
4. Related To: select Instructor__c → Next.
5. Field Label: Instructor (API Name: Instructor__c).
6. Complete Field-Level Security and Page Layout options → Save



Milestone 5 – Validation Rules:

Activity 1: Student Email Domain Validation

Purpose:
To ensure students use only allowed institutional email addresses.

Steps:

1. Go to Setup → Object Manager → Student__c.
2. Click Validation Rules → New.
3. Rule Name: Student_Email_Domain_Validation.
4. Error Condition Formula: (example for @student.edu)

 NOT(CONTAINS(Email__c, "@student.edu"))

5. Error Message: Email must be a valid student institutional email. Error Location: Field → Email__c.
6. Click Save.

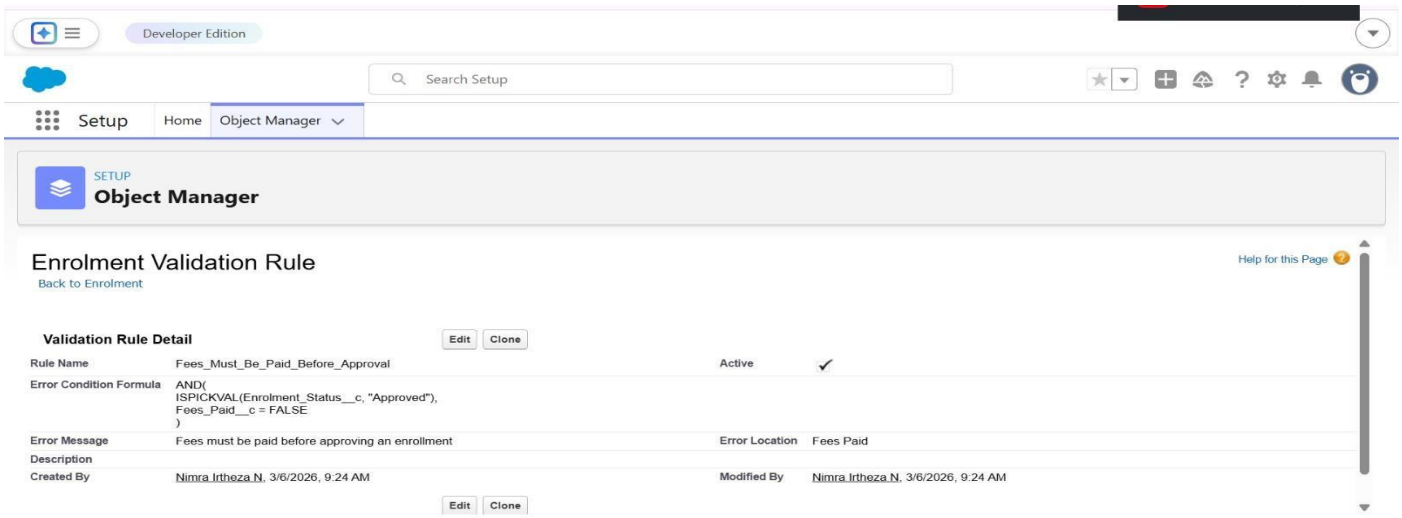
Activity 2: Fees Must Be Paid Before Approval

Purpose:
Prevent Enrollment from being approved until fees are paid. **Steps:**

1. Go to Setup → Object Manager → Enrollment__c.
2. Click Validation Rules → New.
3. Rule Name: Fees_Must_Be_Paid_Before_Approval.
4. Error Condition Formula: AND(

```
ISPICKVAL(Enrollment_Status__c, "Approved"),
                    Fees_Paid__c = FALSE
                )
```

5.Error Message: Fees must be paid before approving an enrollment. 6.Error Location: Top of Page (or field as needed).
Click Save.



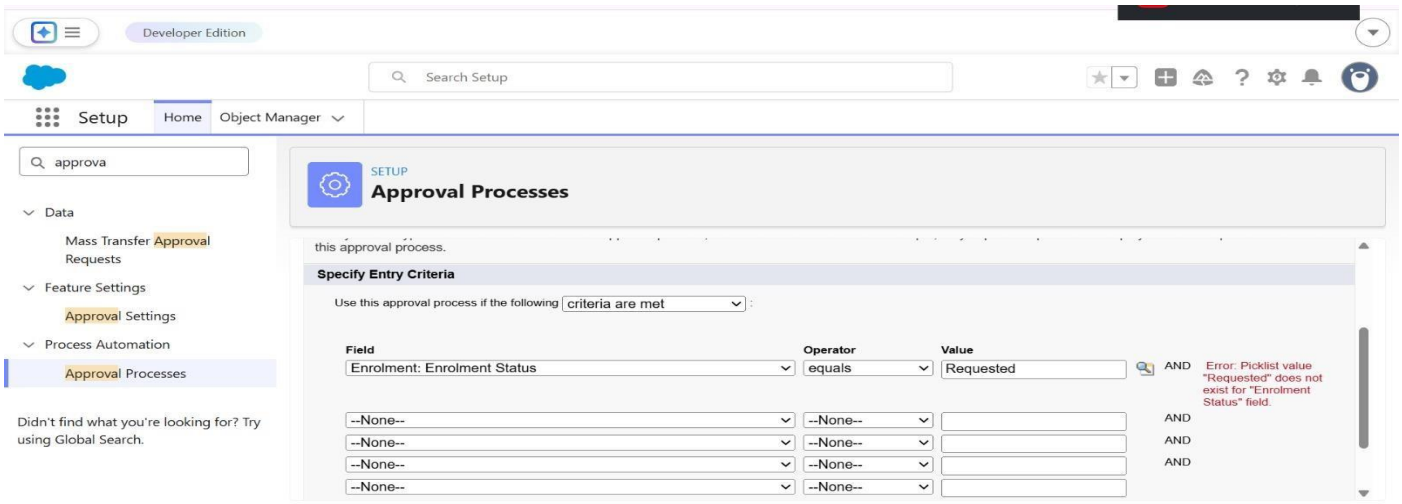
Milestone 6 – Approval Process

Activity 1: Create Approval Process for Enrollment Requests

Purpose:
Route Enrollment requests to Training Manager for approval or rejection.

Steps:
1. Go to Setup → Approval Processes → select Enrollment__c.
2. Click Create New Approval Process → Use Standard Setup.
3. Process Name: Approval_Enrollment_Request.
4. Entry Criteria: Enrollment_Status__c = "Requested".

5. Save and configure steps.



6. Add Approval Step:
7. Approver: specific Training Manager user.
8. Under Final Approval Actions:
9. Add Field Update to set Enrollment_Status__c = "Approved".
10. Under Final Rejection Actions:
11. Add Field Update to set Enrollment_Status__c = "Rejected".
12. Add Email Alert to send rejection email to student.
13. Activate the approval process.

Milestone 7- Tabs

Activity 1: Creating a Tab for the Student Object:

Go to Setup,

1. In the Quick Find box, type Tabs.
2. Under Custom Object Tabs, click New.
3. Select Student from the object list.
4. Choose a tab style (icon).
5. Click Next, assign it to all profiles, and then click Save.

Activity 2: Creating Remaining Tabs

1. Now create the Tabs for the remaining Objects, they are “Courses, Instructors, Enrollment”.
2. Follow the same steps as mentioned in Activity -1

Milestone 8 - The Lightning App

Activity 1: Creating the Lightning Application for the Project

Navigate to **Setup**.

Enter App Manager in the Quick Find search box.
Click New Lightning App. Provide
the app details:
App Name: Student Enrollment & Course Management
Developer Name auto-fills
Description: Optional, but can describe the purpose of the app Click
Next and choose the following settings:
App Branding (optional): Add logo or select color theme
Navigation Style: Choose Standard Navigation
Click Next and assign the app to specific profiles (e.g., **Admin, Enrollment Officer, Instructor**).

Click Next to select the items (tabs) to be included in the app. Add:

1. Student
2. Course
3. Instructor
4. Enrollment
5. Reports
6. Dashboards
7. Home
8. Tasks

Click Next and review the app settings. Finally,
click Save & Finish.

Milestone 9 – Page Layouts and Record:

Activity 1: Create Record Types for Enrollment:

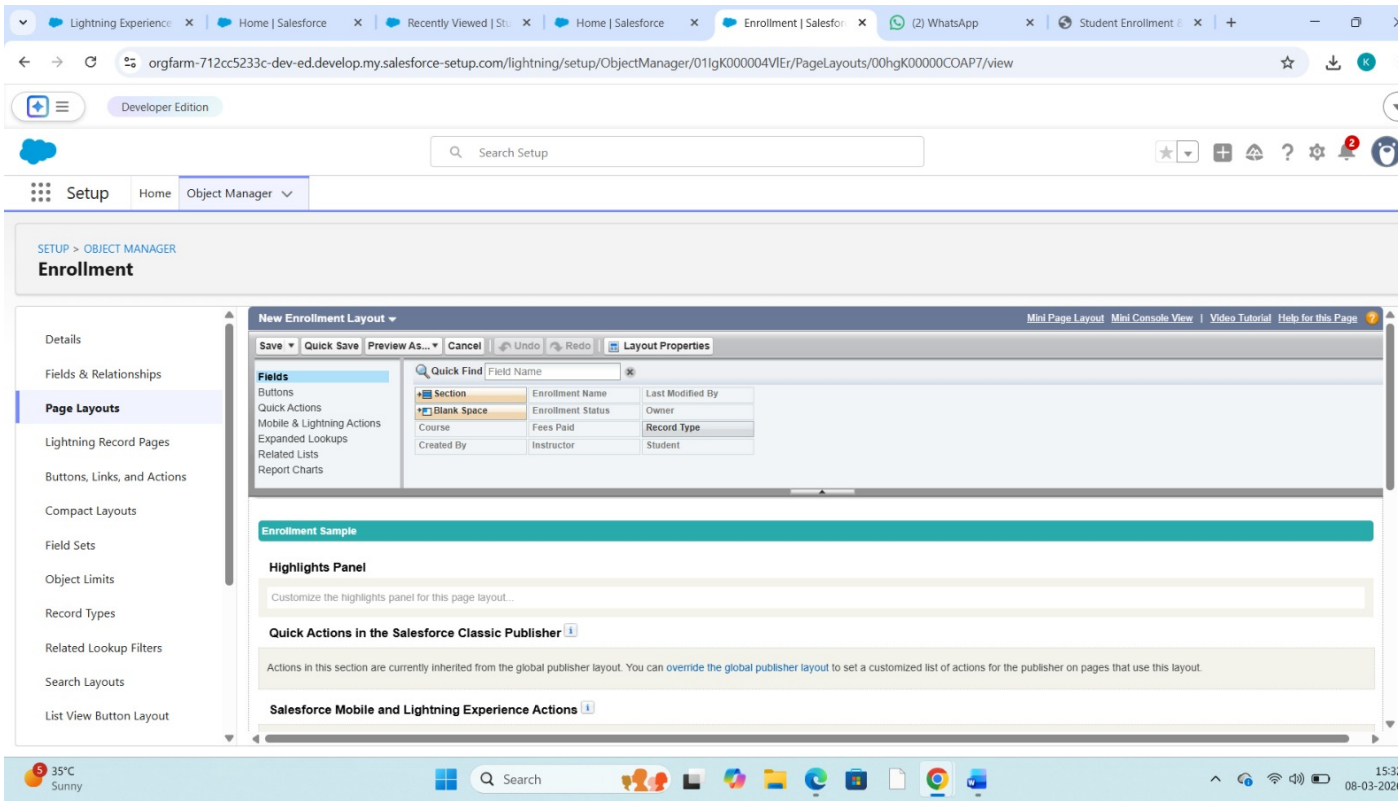
Purpose:
To separate New Enrollment vs Re-Enrollment processes.

Steps:
1.Go to Setup → Object Manager → Enrollment__c.
2.Click Record Types → New.
3.For the first record type:

- Existing Record Type: Master
- Record Type Label: New Enrollment
- Enable for required profiles (Admin, Enrollment Officer).
- Select the default Page Layout → Save & New.

4.For the second record type:

- Record Type Label: Re-Enrollment ● Enable for same profiles.
- Select the default Page Layout → Save.



Activity 2: Separate Page Layo Createuts for Each Enrollment Record Type

Purpose:
To show different fields for New Enrollment vs Re-Enrollment.

Steps:

1.Enrollment__c object → click Page Layouts.
2.Click New to create a layout for New Enrollment: ● Clone from existing Enrollment Layout → name it New Enrollment Layout → Save.
- Keep fields relevant for first-time enrollment: Student, Course, Instructor, Enrollment Date, Status, Fees, etc.
- Remove unnecessary re-enrollment fields if any.
- Click Save.

3.Again, click New to create Re-Enrollment Layout:
- Clone existing layout → name it Re-Enrollment Layout → Save. ● Include fields like previous Enrollment reference (if any), ReEnrollment Reason, Status, Fees, etc.
- Click Save.

4.Click Page Layout Assignment → Edit Assignment.
5.For each profile and record type:
- New Enrollment → use New Enrollment Layout.

6.Re-Enrollment → use Re-Enrollment Layout.

7. Click Save.

Activity 3: Enrollment R Addelated Lists to Parent Objects:

Purpose: To see all Enrollments from Student, Course, and Instructor records.

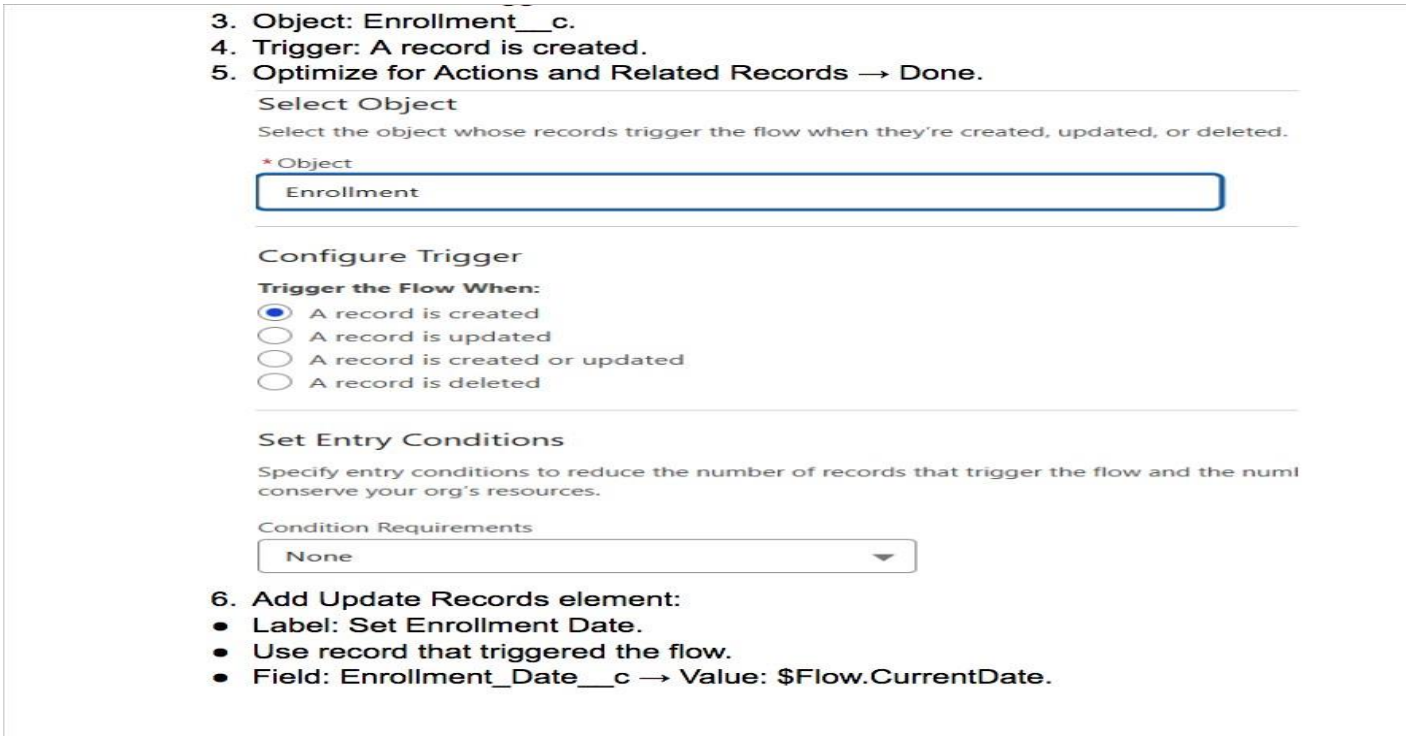
a) Student → Enrollment Related List
Go to Setup → Object Manager → Student__c.
Click Page Layouts → open the main layout. In the palette, select Related Lists.
Drag Enrollments related list onto the layout.
Customize columns if needed → Save. b)
Course → Enrollment Related List
Go to Object Manager → Course__c → Page Layouts. Open layout → add Enrollments related list.
Save.
c) Instructor → Enrollment Related List
Go to Object Manager → Instructor__c → Page Layouts. Open layout → add Enrollments related list. Save.

Milestone 10 – Automation with Flow

Activity 1: Auto-Populate Enrollment Date (Record-Triggered Flow) Purpose:

Set Enrollment_Date__c to today when Enrollment is created. Steps:

1. Go to Setup → Flows → New Flow.
2. Select Record-Triggered Flow → Create.
3. Object: Enrollment__c.
4. Trigger: A record is created. 5. Optimize for Actions and Related Records → Done.



6. Add Update Records element:
   - Label: Set Enrollment Date.
   - Use record that triggered the flow.
   - Field: Enrollment_Date__c → Value: $Flow.CurrentDate.

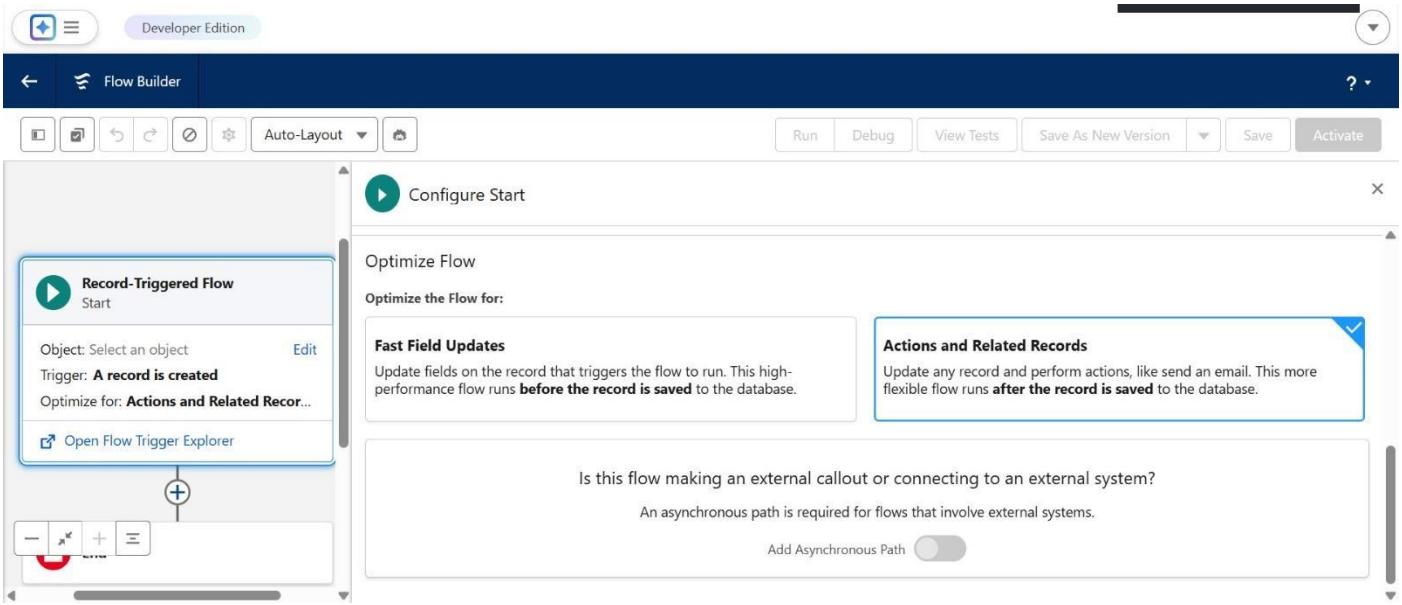
7.Save as SetEnrollmentDate → Activate.

Activity 2: Send Email When Enrollment Approved

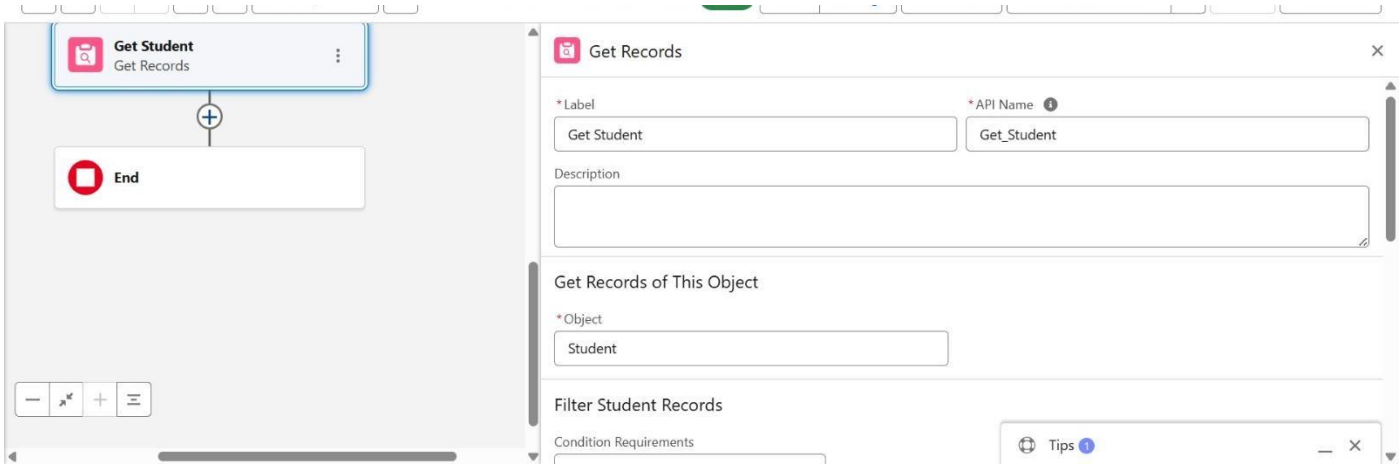
Purpose:
When Enrollment_Status__c = Approved, send email, alert admin, and set Student to Active.

Steps (high level for document):

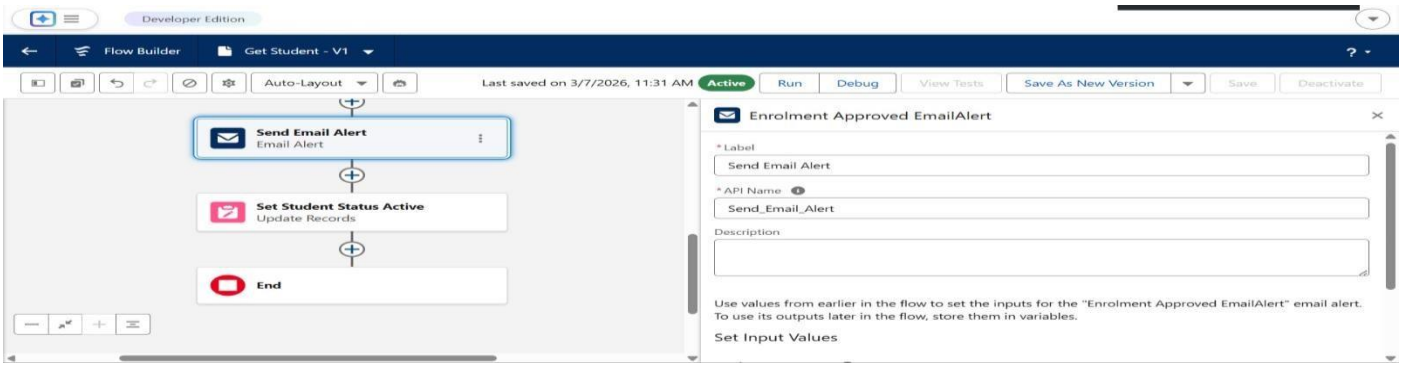
1. Create Email Template and Email Alert for student notification.
2. Go to Flows → New → Record-Triggered Flow.
3. Object: Enrollment__c, Trigger on update.
4. Condition: Enrollment_Status__c Equals "Approved".



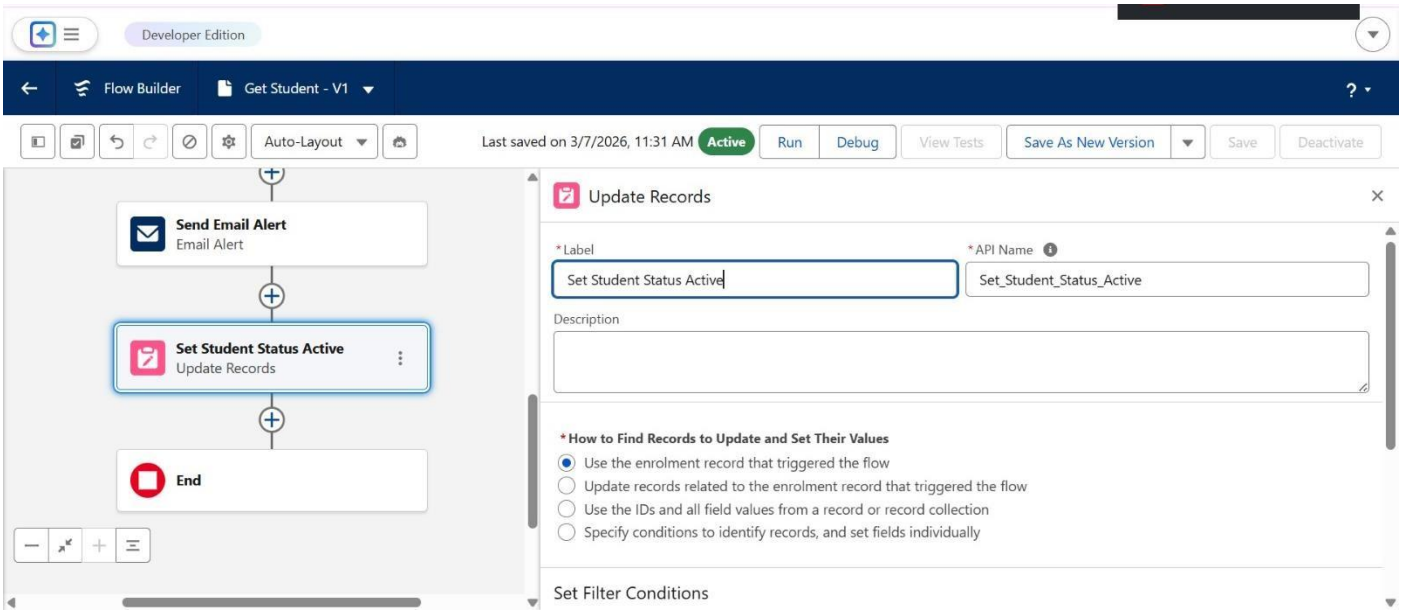
5. Add Get Records to fetch related Student__c.



6. Add Action (Email Alert) to send email to student.



7. Add Action to notify Admin if needed.
8. Add Update Records to set Student__c.Status__c = "Active".



8. Save as Enrollment Approved Action → Activate.

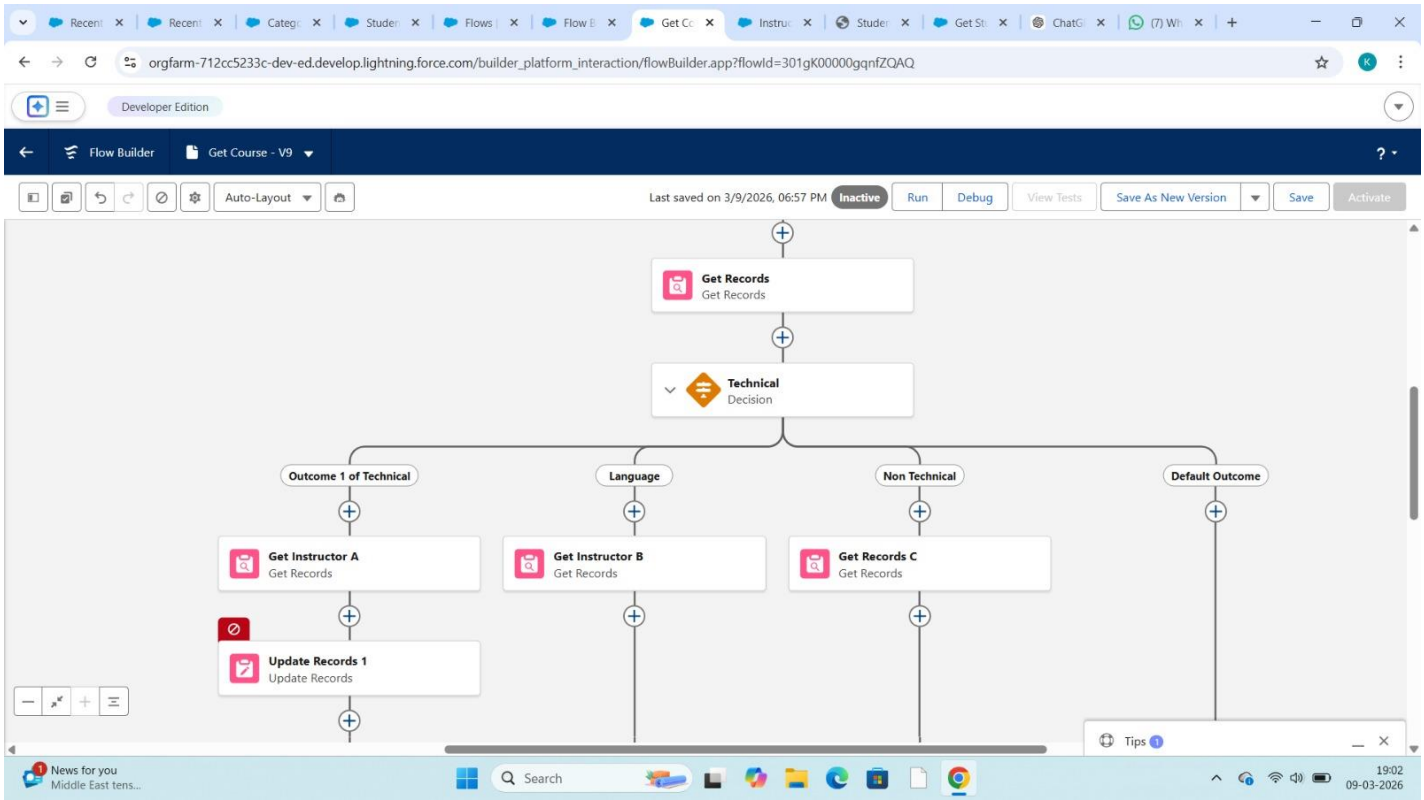
Activity 3: Auto-Assign Instructor Based on Course Category

Purpose:
Assign Instructor automatically based on Course category.

Rules:

- Technical → Instructor A
- Language → Instructor B
- Non-Technical → Instructor C

Steps:
1. Prepare Instructor__c records with codes (e.g., INSTR_A, INSTR_B, INSTR_C).
2. Create Record-Triggered Flow on Enrollment__c (created/updated).
3. Add Get Records to fetch related Course__c.
4. Add Decision element on Course__r.Category__c:
5. Technical / Language / Non-Technical outcomes.
6. For each outcome:
7. Get Instructor record (A/B/C) based on code or name.
8. Update Records: set Instructor__c = Get_Instructor_X.Id. 9. Save as AutoAssign_Instructor → Activate.



Activity 4: Auto-Create Task for Follow-Up

Purpose:
When Enrollment is “Requested”, create a follow-up task for Admin.

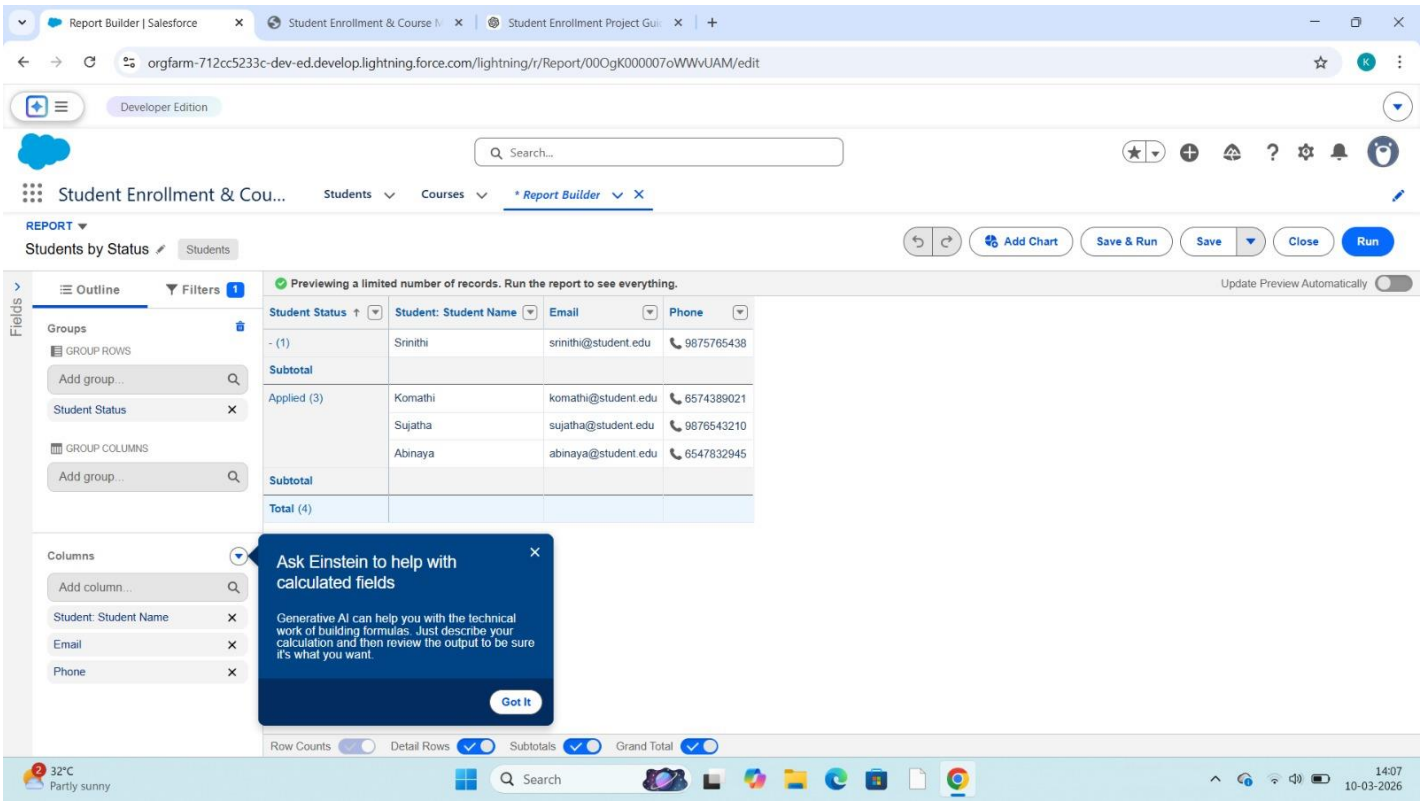
Steps:
1. Create Record-Triggered Flow on Enrollment__c.
2. Trigger: Record created or updated; condition Enrollment_Status__c = "Requested".
3. Add Get Records to fetch Admin user (by Username / Profile).
4. Add Formula (Date): TODAY() + 2 for due date.
5. Add Create Records for Task:
6. Subject: Follow up on enrollment request.
7. OwnerId: Admin user Id.
8. WhatId: Enrollment Id.
9. ActivityDate: formula Today + 2. 10. Save as Create_Followup_Task → Activate.

Milestone 11 – Reports:

Activity 1: Create “Students by Status” Report

1. Go to **Reports** → **New Report**.
2. Report Type: Students. 3. Group rows by Status__c.
4. Add columns as needed (Name, Email, Phone).

5. Save as Students by Status.



Activity 2: Create "Enrollments by Course" Report

1. New Report → Report Type: Enrollments.
2. Grouprows by Course__r.Name.
3. Show Record Count per course.
4. Save as Enrollments by Course

Activity 3: Create "Pending Enrollment Approvals" Report

1. New Report → Enrollments report type.
2. Filter: Enrollment_Status__c = "Requested".
3. Add columns (Student, Course, Owner, Created Date).
4. Save as Pending Enrollment Approvals.

Activity 4: Create "Revenue Report (Fees Paid)" Report

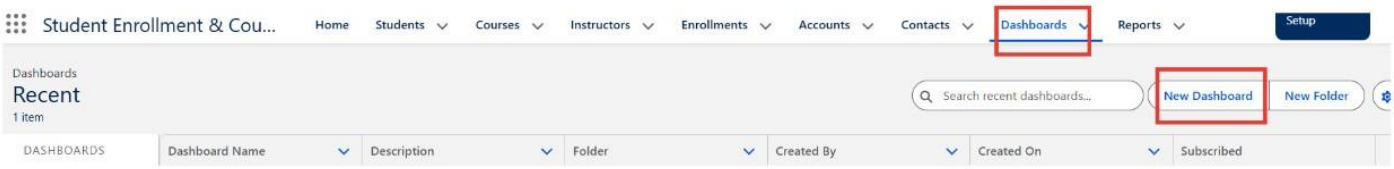
1. New Report → Enrollments report type.
2. Filter: Fees_Paid__c = TRUE.
3. Group by Course__r.Name.
4. Summarize Course_Fee__c or similar fee field.
5. Save as Revenue Report – Fees Paid.

Milestone 12 – Dashboards:

Activity 1: Create “Student Managemet Dnashboard”

Steps:

1. Go to **Dashboards → New Dashboard**.
2. Name: Student Management Dashboard.

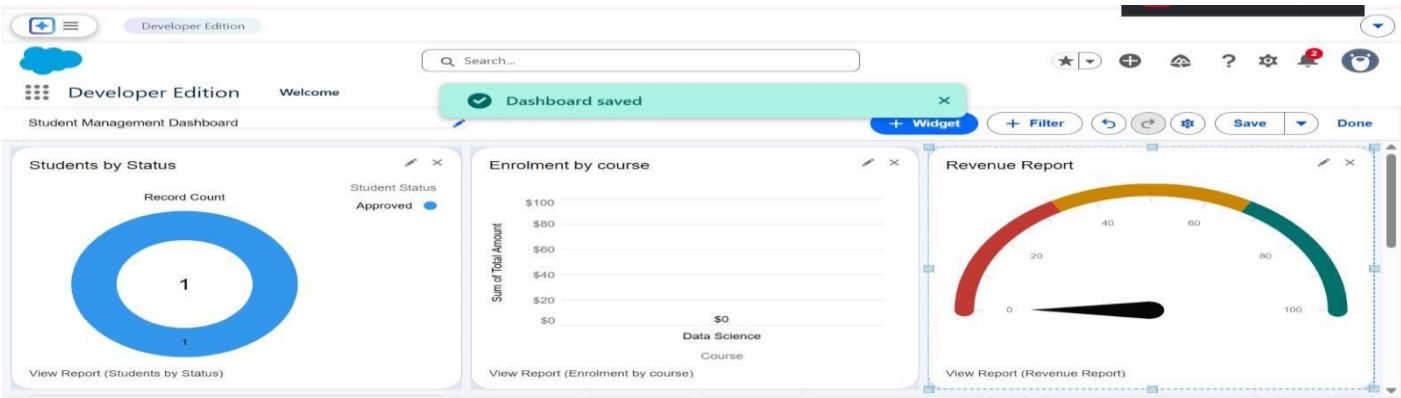


3. Select folder → **Create**.
4. Select new Dashboard folder and Save.

Add components:

- **Donut Chart** → using Students by Status report.
- **Bar Chart** → using Enrollments by Course report.
- **Gauge** → using Revenue Report – Fees Paid (sum of revenue field).
- **Table** → using Pending Enrollment Approvals report.

5. Arrange components on canvas.



Click **Save → Done**.

Milestone 13 – Security Setup

Activity 1: Configure Profiles

1.Go to **Setup → Profiles → New** (or Clone**Profiles Required):**

- **Admin** – Full access.
- **Enrollment Officer** – Create/Update Enrollments.
- **Instructor** – Read-only access to assigned Enrollments.

2.**Steps (example for Enrollment Officer** fName: Enrollment Officer.

3. In **Object Settings**:
   - Enrollment__c: Read, Create, Edit.
   - Student__c / Course__c: Read (and Edit if required).
4. Save.

Repeat similarly for **Instructor** profile with **Read-Only** on Enrollments

Activity 2: Create Permission Sets

1. Go to **Setup → Permission Sets → New**.
2. Create Custom Object Access (additional access to project objects if needed).
3. Create Dashboard Editor (Create/Customize Reports & Dashboards permissions).
4. Assign to relevant users.

Activity 3: Configure Sharing & OWD

Steps:

1. Go to **Setup → Sharing Settings**.
2. Set **Organization-Wide Defaults**:
   - **Students (Student__c):** Public Read/Write.
   - **Courses (Course__c):** Public Read/Write.
   - **Enrollments (Enrollment__c):** Private.
3. Save.

For Instructor access to assigned Enrollments, optionally:

- Add a **User lookup** on Enrollment (Instructor User).
- Use a simple **Record-Triggered Flow** to set **OwnerId = Instructor User** so they can see only their own records.

7. FUNCTIONAL & PERFORMANCE TESTING

During the testing stage, multiple screenshots were taken from the Salesforce interface to confirm that all the features of the **Student Enrollment & Course Management System (SECMS)** were functioning correctly.

The testing process included verifying the creation of records for students, courses, instructors, and enrollments. Validation rules were tested to ensure that mandatory fields, eligibility requirements, and enrollment conditions were correctly enforced.

The behavior of different record types was also checked to confirm that course categories were handled appropriately. Automated processes built using Salesforce Flow were tested to verify functions such as enrollment approval and seat availability checks.

In addition, Apex triggers were tested to ensure that automatic updates and confirmations were executed whenever required.

Reports and dashboards were also generated and captured as screenshots to validate proper data visualization, enrollment tracking, and overall system performance.

All screenshots collected during testing are included in the documentation as evidence of successful implementation.

8. ADVANTAGES & DISADVANTAGES

Advantages

- **Centralized Data Management**
  All information related to students, courses, instructors, and enrollments is stored in one system, making data management easier.
- **Automated Workflows**
  Automation tools help reduce manual work by automatically handling approvals, validations, and record updates.
- **Real-Time Reporting**
  Reports and dashboards provide instant insights into enrollment trends, revenue, and other key data.

Disadvantages

- **Dependency on Salesforce Platform**
  The system operates completely within the Salesforce environment, which means organizations rely on the platform for system access and management.
- **Initial Setup Effort**
  Configuring objects, fields, automation, and relationships requires time and proper planning during the initial setup stage.

9. CONCLUSION:

The **Student Enrollment & Course Management System** developed using Salesforce effectively simplifies and organizes the entire academic management process.

The system supports multiple activities including student registration, course management, enrollment tracking, instructor assignment, approval processes, revenue monitoring, and report generation.

By utilizing Salesforce features such as validation rules, flows, approval workflows, and interactive dashboards, the system enhances data accuracy, improves operational efficiency, and supports better decision-making.

Overall, this project demonstrates how Salesforce can convert traditional manual academic management processes into a structured, scalable, and efficient digital solution.
